

Unfortunately, most of the allopathic (traditional western) medicine does not recognize or understand chronic stealth infections; so often they are misdiagnosed or go untreated. It is possible you or a family member has been suffering from the effects of a chronic stealth infection and not even know it.

Common chronic stealth infection symptoms include:

- Extreme fatigue (chronic fatigue)
- Hard time losing weight (thyroid/adrenal function)
- Food or chemical sensitivities (gut issues)
- Anxiety/depression (gut issues)
- Pain (fibromyalgia, rheumatoid arthritis, restless leg syndrome)
- Nervous system issues (multiple Sclerosis, tics, sensory issues)
- Any hard to explain symptoms
- Food intolerance

**What conditions might be caused by stealth pathogens?**

- *Dementia*
- *Rheumatoid Arthritis*
- *Fibromyalgia*
- *IBS*
- *Ulcerative Colitis*
- *Diabetes*
- *Digestive diseases*
- *Chrons*
- *Chronic Fatigue*
- *Hyperthyroid (Graves)*
- *Hypothyroid (hashimotos)*
- *Other autoimmune...*

*Stealth pathogens can hide in biofilms throughout the body, which is one reason **blood tests aren't always the most effective test.** Your healthcare provider can walk you through the best tests for the suspected triggering pathogens...*

***Treatment for these infections is always individualized and includes a variety of prescription and herbal antimicrobials.***
